

+PReS Share

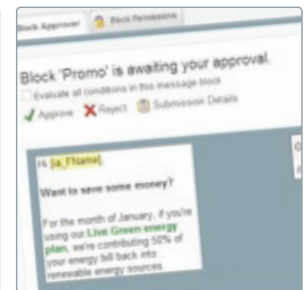

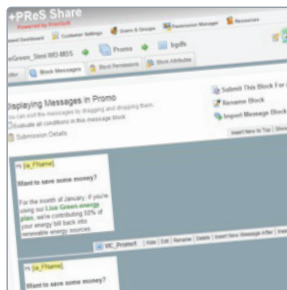

+PReS Share is a web-enabled document content management system for creating marketing documents and customer correspondence. It enables multiple users across multiple remote locations to add, modify and delete the content of predefined message blocks. Powerful validation technology allows you to approve message blocks remotely and monitor the development of content. Varying levels of authorisation protect corporate business rules while simplifying the design, submission and production of customer correspondence.

Features

- Dedicated approval process
- Variable image and text block repository
- Easy to use GUI interface
- No software required as all access is web based

Benefits

- Faster time to market
- Increased corporate governance and version control
- Improved customer satisfaction with faster response times
- Increased employee productivity

Technical Information

- Browser support for both Internet Explorer & Mozilla Firefox
- PReS Designer, scripting & Newleaf support
- Multi tenancy support
- Full Unicode support
- Role based user security
